Alaska Legislature Organized Monday

Senator Ray, of Seward, elected
President of Senate - E. B. Col-
lins is chosen Speaker of House.

Juneau Alaska, March 3. The first Legislature of the Territory of Alaska met and organized Monday afternoon in Elks Hall. Members of both bodies were administered the oath of office by Judge T. R. Lyons and Peter D. Overfield. General Wm. L. Distint presided at the opening of both bodies.

The presiding officers of both houses were elected unanimously. L. V. Ray, of Seward, being made President of the Senate and E. B. Collins, Speaker of the House. Other offices were rapidly filled and the Governor notified that the Legislature was ready for action. Silver dollars were flipped by the senators from each division to see which should get the long term, senators Tanner, Bruner, Millard and Sutherland being the ones fortune favored.

At 3 o'clock both houses had or-

ganized and met to receive the message of Governor Clarke. Several resolutions have been passed in both bodies approving the Alaska Railroad Commission's report and sending messages praying for support from the new President.

Vanguard Of Stampede Reported On Al-Ki.

Skookum Jim Says \$6.00 a Pan.

Latest reports from Seattle relative to the Eldorado which the veteran prospector, Skookum Jim, has found are startlingly confirmative of the rumor that he has made a rich strike. Six dollars per pan is the value which the latest report gives to the public of his strike near Atlin.

The vanguard of the stampede has taken passage on the Al-Ki which should arrive here Saturday.

Gov. Clark Resigned

Governor Clark tendered his resignation of office to President Wilson Tuesday.

President's Advisors.

At noon, March 4th, President Wilson who has kept the whole commonwealth at sea as regards his cabinet, announced the following members to be his advisors this term.

Secretary of State—William Jennings Bryan of Nebraska.

Secretary of Treasury—Wm. G. McAdoo of New York.

Secretary of War—Lindley Garrison of New Jersey.

Secretary of the Navy—Josephus Daniels of North Carolina.

Secretary of the Interior—F. K. Lane of California.

Secretary of Agriculture—David F. Houston of Missouri.

Secretary of Commerce—Henry S. Redfield of New York.

Secretary of Labor—William B. Wilson of Pennsylvania.

Attorney General—James G. McReynolds of Tennessee.

Atlin Indian Discovered Dease Lake Diggings.

J. A. Dofflemyer confirms report that Telegraph citizens are feverish. Indians stampeding.

Cunningham Gone New To Diggings.

J. A. Dofflemyer, arriving down the Stikine Tuesday, from Telegraph Creek confirms the reports that a new strike has been made in the Cassiar and that the inhabitants of Telegraph are stampeding to the new diggings.

The strike was made by an Atlin native who has been trapping in the Cassiar this winter. T. H. Cunningham, of Wrangell, who has been busy on the Stikine since October, transporting mining machinery to the interior, has cast his lot with the stampede.

Mr. Dofflemyer and companion were eight days on the trail, having encountered bad traveling on account of snow water on the ice.

W. A. C. Will Have Game And Dance.

At the club meeting of February 27 th, a basketball game with a hop after was decided to be given on the evening of March 17th. With no event or attraction on the social horizon the Sons of Erin, as well as other sport followers well likely attend the celebration.

Skookum Jim Is Mum

Says The Seattle P-I.

Throngs of eager people and friends from the north seek information about the new Eldorado.

Recorder on Princess May tells of recording claims.

Skookum Jim, who passed through here on February 25th, arrived in Seattle on the 27th and was immediately beset with friends from the north and adventurers who clamored for news of the Eldorado which he is supposed to have found. In spite of their clamors, the P-I, of the 28th says "Jim was secretive. He looked wise and said little. He had with him a poke containing several ounces of coarse gold, and said that the ground he had staked was at least as rich as anything that was ever worked on the creeks about Dawson. He said that he went only four feet deep and panned dirt that ran 50 cents to the pan. As to the exact location of the strike he would give no information even to his closest friends from the North, declaring that he

would do no talking until George Cormack, arrived here to advise him."

Yukon Recorder on May.

Percy Reid, the Pioneer Yukon Recorder, who went south on the Princess May last Friday enroute Ottawa, Canada, called at the Marshal's office while the boat was in, to see Mr. and Mrs. Schnabel, with whom they were acquainted in Dawson. In reply to questions about the new strike Mr. Reid said he recorded Skookum Jim's claims near Teslin Lake. Mr. Reid related that he asked Jim about the country and received the vague reply that "The water tastes like gold, the gravel looks like gold and the whole country looks good."

Stampede Likely.

(Continued on last page.)

Quality Always Asserts Itself

This is especially true of Sherwin-Williams floor finishes. These finishes are the successful result of nearly fifty years effort to produce a line of perfect floor finishes. This line is manufactured under the eyes of experts, from materials which are produced by The Sherwin-Williams Company themselves. Among these finishes there is a special paint or varnish product for every kind of floor. The following will give you some idea of the finishes we carry.

For the Parch Floors.

S-W Parch and Deck Paint. This paint is easily applied, dries quickly and is very durable. It has great wear and weather resisting properties.

For Inside Soft-wood Floors.

S-W Inside Floor Paint. This paint is made expressly for inside floors. It will stand any amount of hard wear without losing its finished appearance. S-W Inside Floor Paint comes in ten very servicable colors.

For the Hard-wood Floor.

S-W Varnishes. Hard-wood floors should not be hidden with paint. For this reason the Sherwin-Williams Company manufacture special varnishes for floors. Floors finished with these varnishes are not easily scratched or marred. The varnishes not only protect the wood but bring out its natural beauty.

For Floors and Furniture.

S-W Floorlac. This is a combination of a non-fading stain and a good floor varnish. Floorlac brings out and intensifies the grain in all woods. It is equally as good for furniture as floors, and produces attractive natural wood effects.

We will be pleased to furnish you with further information and color cards on the finishes described above if you will but drop in at our store.

Northrup Turns Up.

Thought to have been beached, wrecked or something. Third relief party brings him in safe and sound.

Another bunch of anxiety for an overdue trapper was tendered the friends of Geo. Northrup early this week who feared he had been wrecked or driven ashore in a storm while coming in from his trapping camp on Zarambo Island. Geo. had been several days overdue when the first relief party, W.

Taylor set out to search for him early this week. The Antelope took up the search Tuesday, cruising along the shore of Vanks and Zarambo Island but failing to get a trace of the missing trapper. The third rescue party, James Bradley, of the launch Louise, found Northrup at his camp where he was detained on account of engine trouble and waiting for a fair wind with which to attempt a row back to town.

Northrup was greatly pleased to see the rescue boat arrive as his larder was getting low and his family anxious for his safety as he had only intended to stay in camp a few days.

DELINQUENT TAX LIST FOR 1912.

NOTICE IS HEREBY GIVEN, that in pursuance of Section 20 of Ordinance No. 12 of the Town of Wrangell, Alaska, duly passed and approved on the 4th day of August, 1904, providing for the publication of the Delinquent Tax List of the said Town; the following taxes having become delinquent, the same are now published as follows:

Dated at Wrangell, Alaska, this 22nd day of January, 1913.

F. Matheson

Town Treasurer and ex-officio Tax Collector of the Town of Wrangell, Alaska.

Head Hunters of the Philippines.

Curiously enough, the head hunting peoples of the Philippines are apparently limited to northern Luzon. None of the warlike hill tribes inhabiting other parts of the archipelago are known to take the heads of their victims. The explanation of their head hunting customs which is given by the Negritos of northeastern Luzon is very simple. They believe that each family must take at least one head a year or suffer misfortune in the form of sickness, wounds, starvation or death. Their victims are always beheaded with bolos. Heads are buried in the ground under the "houses" of the men who take them. Plates or ollas are placed over the spots where the heads are buried and possibly contain offerings to evil spirits. The "houses" under which heads are buried are then abandoned and their supposedly fortunate owners look forward to a period free from death, sickness or injury and to success in their hunting and fishing—National Geographic Magazine.

A Fish With a Lantern.

No matter what animals or groups of animals are studied, it will always be found that their leading physical traits are exactly adapted to their habits and conditions. A striking illustration of this fact is afforded by the torch fish. This is a deep sea fish that carries on its nose something like a short, thin tube, which it can illuminate with a phosphorescent light of extinguish at pleasure. It does not use this lantern to guide it on its way in the depths of the ocean or to enable it to see what is going on in the neighborhood. The light is put to a more practical use. When the fish feels hungry it lights up to attract smaller fish. They dart for the light and find themselves in the capacious mouth of the fish. How the lantern is lighted and extinguished is not yet clearly understood.

Fortune Telling.

Fortune telling is almost as old as the human race. We have no knowledge of the time when or place where it originated. We only know that the practice was in vogue as far back as we can go. Some claim that it had its beginning with the Chaldean astrologers, who claimed that they were able to foretell the future by aid of the planets. The oldest of the nations were familiar with the practice, and by the gypsies it has been carried all over the world. It is perfectly natural for man to want to know about tomorrow and next year, and it required but little effort on his part to listen to fortune tellers. To this day the business is carried on with profit by the gypsies and others who impose upon the credulity of the superstitious.—New York American.

OVERCOMING QUICKSAND.

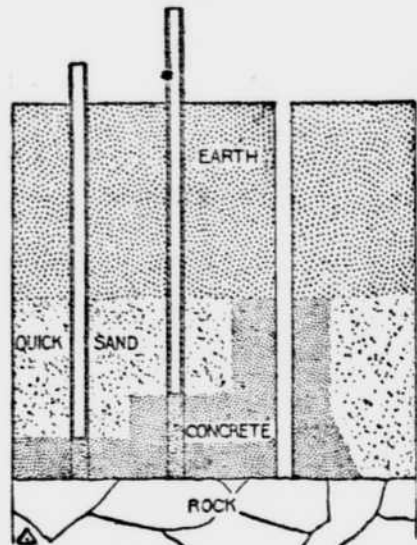

Method of Injecting Concrete to Hold Shifting Soil.

The sinking of mining and engineering shafts is often made difficult by the encountering of bodies of quicksand. The problem that arises often blocks the successful execution of the work at hand, demanding much careful study, says the Iowa Engineer.

One method proposed to overcome the quicksand is the injection of concrete. It consists in cementing that portion of the sand stratum immediately surrounding the proposed shaft into a solid, water tight concrete mass.

In the illustration, which is a vertical section through a surface stratum of subsoil, a substratum of quicksand and beneath that a base of rock, is shown the injection method of treating shafts.

The initial step of the process consists in locating the spot where the shaft is to be finally sunk and then to bore an outer series of holes around it to form a skeleton. As each hole is

METHOD OF CONTROLLING QUICKSAND.

drilled a well casing is driven through the stratum of quicksand. The number of holes depends upon the thickness of the sand. As soon as the drill has been removed and a well casing put in place cement mixed with a large proportion of water is forced down by hydraulic pressure, and the casing is pulled up about a foot so that the cement will flow out laterally from the bottom of the pipe. After a time the sand will become choked with the cement, which will be recorded by the pressure gauge on the pump. Then the casing is raised another foot and cement injected until the gauge shows the second portion of quicksand to be impregnated, and the process is repeated until the entire stratum has been treated.

The next hole in the outer series is treated, and so on until the series is completed. Around each hole there will now be an area of solidified quicksand, but no two of these areas merge. Therefore it becomes necessary to sink an inner series of holes, so located that the area treated through each will close up the interstices between the areas treated through the first series of holes. It is quite possible, however, that even as yet a perfectly water tight wall has not been formed around the shaft area, and it may be necessary to drill one or two extra holes, through which cement will be forced out into the gaps remaining, thus causing them to be effectively filled.

After the concrete has been allowed a sufficient time to set the shaft may be sunk.

Compressed Air in Steel Works.

Compressed air is used for many operations in steel plants where steam cannot be used on account of condensation. Among the most important uses are for operating the bells on top of the blast furnaces, for opening and closing furnace doors, for riveting, shearing and punching in bridge and plate shops and for operating special machinery such as the roll tables in three high mills. The pressures used are from 75 to 110 pounds per square inch.

The same that has been said of steam engines for auxiliary power in the steel plant is true of air compressors. The small unit, driven by a plain slide valve engine, has given way to a large unit driven by a Corliss engine or by an electric motor. Naturally, where large blast furnace gas engines are used for generating power, electricity driven air compressors are used in preference to the steam driven.—Engineering Magazine.

(Continued from first page.)

On the Jefferson, the first boat leaving Seattle since Jim reached there, G. W. Pennington and R. LaFlour came to Wrangell prepared to go inside chasing the rainbow. They have a complete outfit and one dog team. Letters from out of town are being received here inquiring into the foundation of the strike report. One man, writing to Deputy Marshall Schnabel said "I'm ready to stampede as soon as I can get definite and accurate news of the location and value of the diggings." This statement probably expresses the views of many adventurous fortune hunters who are likely to form a stampede if Skookum Jim gives out reliable and favorable information.

**Citizens And Visitors
Dance 'Til Daylight.**

Sixty-nine Petersburgers enjoyed
the A. B's. Inaugural Ball.

Show me the man who says he didn't get enough dancing at the A. B's. Inaugural Ball held at the Rink Tuesday evening. If there be one he didn't attend for the dance was continued until 4:20 Wednesday morning when it was dissolved by mutual consent.

Sixty-nine Petersburgers, including the Petersburg Brass Band, which furnished the music of the evening, came down from the city in the Narrows on the P. C. & N. P. boat Marion and the cruiser, Loraine. The invading army was met at the slip by a committee of the local camp of Arctic Brotherhood, Mayor Emery and a generous bunch of interested citizens. The Marion left for Petersburg at six o'clock Wednesday morning, the Loraine leaving later in the day.

**Prince Rupert Expects
Great Lakes Vessel.**

Having reported at San Diego, California, on February 23d, where she called to take on coal, the Canadian government steamer, Estevan, Captain Lingdren, 130 days from Collingwood, Ont., is expected into Prince Rupert within a few days.

The Estevan left Collingwood September 15, crossed the Great Lakes and proceeded to Montreal by way of the Welland Canal. From Montreal the steamer went to Quebec, thence to Newport News and around to the Pacific through the straits of Magellan. The Estevan will be employed in caring for buoys, lighthouses, etc. Canadian waters, and her home port will be Prince Rupert.
